Please find below and/or attached an Office communication concerning this application or proceeding.

# Office Action Summary

Application No.

09/844,843

Applicant(s)

PRUTEANU ET AL.

Examiner

James Keenan

Art Unit

3652

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 04 February 2004 and 12 January 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 51-53, 55-57 and 59-64 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 51-53, 55-57 and 59-64 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: \_\_\_\_\_

Art Unit: 3652

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/12/04 has been entered.

2. The disclosure is objected to because of the following informalities: there is no description of figure 7.

Appropriate correction is required.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 51-53, 55-57, and 59-64 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 63, line 9, a comma should be inserted between "arm" and "said";  
and lines 17-18, "said one or more curved arms" should be --said at least one arm--.

In claim 64, lines 17-18, "said one or more curved arms" should be --said at least one arm--.

Art Unit: 3652

In claims 56 and 57, there is no clear antecedent basis for "said sensing system ... of said arm arrangement".

In claim 59, there is no clear antecedent basis for "said hydraulic cylinder".

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 64 is rejected under 35 U.S.C. 103(a) as being unpatentable over Brandt ((US 5,851,100) in view of McNeilus et al (US 5,833,429), both of record.

Brandt, as noted previously in paper #15, shows the invention essentially as claimed, particularly a pivoting arm lift and dump arrangement including double acting hydraulic linear actuator 68, arm 26, and mounting shaft 74.

Brandt does not show the arm curved to reduce the lift and dump radius.

McNeilus et al, as also noted in paper #15, show a similar invention assigned to the same assignee as Brandt, including several embodiments of pivoting arms, some of which (figures 12-15) are virtually identical to that of Brandt, and others (figures 5 and 8) which have a curved or bent structure.

It would have been obvious for one of ordinary skill in the art at the time of the invention to have modified the apparatus of Brandt by utilizing a bent or curved arm structure, as shown by McNeilus et al, as this is shown to be an alternate equivalent

Art Unit: 3652

arm structure in the same environment, and would at least to some extent reduce the lift and dump radius.

7. Claim 59 is rejected under 35 U.S.C. 103(a) as being unpatentable over Brandt in view of McNeilus et al, as applied to claim 64 above, and further in view of Duell et al (US 6,123,497) and Tordenmalm et al (US 4,896,582), both of record.

As noted in paper #15, Brandt does not show a control means to damp the action of the hydraulic cylinder toward the extremes of travel thereof, while Duell et al show a mechanically "cushioned" hydraulic cylinder in a similar refuse collection vehicle and Tordenmalm et al show a control system including sensing and braking means for damping a piston as it approaches the end position of travel within a hydraulic cylinder.

It would have been obvious for one of ordinary skill in the art at the time of the invention to have modified the apparatus of Brandt by utilizing a control means for damping the action of the cylinder, as suggested by the combined teachings of Duell et al and Tordenmalm et al, as this would simply be a well known expediency in the art for reducing shock and damage to a piston/cylinder assembly.

8. Claims 51, 55, 56, 60, 61, and 63 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brandt in view of McNeilus et al and Sizemore et al (US 5,505,576), of record.

The apparatus of Brandt even as modified by McNeilus et al does not show a hydraulic rotary actuator as the means for pivoting the arm relative to the boom.

Art Unit: 3652

Sizemore et al, as noted in paper #15, show a refuse collection vehicle with rotary actuator 49 which rotates lift arm 18.

It would have been obvious for one of ordinary skill in the art at the time of the invention to have further modified the apparatus of Brandt and McNeilus et al by substituting the arm hydraulic cylinder with a rotary actuator, as Sizemore et al show this to be a well known and art recognized expediency for pivoting a lift arm, the use of which in the apparatus of Brandt would require no undue experimentation and produce no unexpected results.

Re claims 51, 55, and 56, note paragraph 5 of paper #15.

9. Claims 52, 53, 57, and 62 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brandt in view of McNeilus et al and Sizemore et al, as applied to claims 63, etc. above, and further in view of Duell et al.

As noted in paper #15, Brandt as modified does not disclose controlling the speed of the arm based on the sensed position thereof.

Duell et al, as also noted previously, shows that controlling the rotational speed of a dumping arm 26 can be at least to some extent based on the output of an arm position sensor AP<sub>1</sub>.

It would have been obvious for one of ordinary skill in the art at the time of the invention to have further modified the apparatus of Brandt by controlling the rotational speed of the arm based on the arm position sensor, as suggested by Duell et al, as this would provide greater efficiency and flexibility when operating in the automatic mode.

Art Unit: 3652

10. Applicant's arguments filed 1/12/04 have been fully considered but they are not persuasive.

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Keenan whose telephone number is 703-308-2559. The examiner can normally be reached on Monday through Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eileen Lillis can be reached on 703-308-3248. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
